Territory war on 2 player games

YouTube link to watch mobile first: I know the video says iDevices. Obviously I didn't do it, but it's amazing and really captures the gaming experience better than any video I can make. With it out of the way, know this: War Messenger is one of the best games on Android right now and probably the best game in its genre right now. The messenger of war is epic. It takes the feeling or idea of a console or computer game and puts it on Android for us to enjoy. The first thing I immediately thought of when I saw the surroundings was World of Warcraft. A nerd, I know, but that's what the open world and graphics and textures all reminded me of. It also reminds me of what you're saying, Diablo, since you turn around, fight bad guys, and add skills to your repertoire in the process. Like I said, it's epic. The story must be one of the best I've seen on Android, too. If someone decided to blow it up for a complete game, I wouldn't be surprised, and I hope more joints come (eventually). You're a Ghent, a barbarian on a mission to do some barbaric things and fight a bunch of bad guys along the way. Your companion is a loyal Hassock, a nice, bald alchemist who gives you support through potions and has a bit of a problem with balance (he travels frequently). Go from chapter to chapter, kill bad guys, pick up gold and sing, and upgrade your arsenal. There's an entire store with weapons for Ghent, potions for Hassock, and long names of status upgrades for both. It's entirely up to you how you spend them, and it's such an amazing thing. All controls are done through painting. Tap Space on the screen, Gantt goes there and Suk follows him. That's it, that's it. Press a bad guy to attack him. You can also rule as Hassock's potion by choosing what order he will throw things in and Gannett also has a sweet rage move he can use when his rage gauge fills up. Depending on which sword is fitted will affect what fury move he makes, though. Graphically, I'm pretty shocked. There are real models of unique characters and characters here that look special and unique. The bad legions you're kicking out have the same face, but I wouldn't expect things to be so detailed. This game looks great, though. Environments, weapons, potions, everything. It's really a wonder to see something like this on Android.Performance-wise, my only time to thrive even remotely stuttering is when there were 15+ enemies on screen and I was using a rage attack that hit everyone. Otherwise, this game works well. No stuttering, no delays. The war envoy costs \$1. Go buy it, believe me. I think the whole thing took me a few hours, but it was amazing. There were twists, there were queues. It's totally a voice acted, for God's sake. It really is a gem of a game and anyone who even remotely cares about Android games owes it to themselves to play it. We have download links after recess. Conflict and fighting have video games characterized The early titles on the Atari 2600 and all the way to Xbox One and beyond.
